## Documentation of update the template

1. Created the Dynamic Web Project and converted into Maven project.
2. Created 4 project com.bean , com.dao, com.main, com.service
3. In bean package it contain the class describing the id , name, salary.
4. And dao contains the exception handling case weather the input is right or wrong.
5. Main package to call the working function so that It can operate using  main function.
6. In service update function code is done so that update fundamental can be done by using such operation.
7. There are 2 jsp file one named as index.jsp and product.jsp both used as user interface index for connection and product is for display the element which us stored using product and stored in database.
8. And there you can add you feedback as per the specific product.
